Net Area sown represents total area sown with the crops and orchards counting of area sown more than once in the same year have to show only once. The Net Area sown during 2013-14 was 49.61 lakh hectares represents 43.20 percent of total Geographical area. The Net Area sown during 2013-14 is 49.61 lakh hectares as against 46.54 lakh hectares showing an increase of 6.60 %.

The percentage of net area sown to geographical area by districts during 2013-14 is shown in map 2.3.

District wise details are available in Detailed table II

3.4 Gross Area Sown

Gross Area Sown represents total area cultivated under all food and non-food crops, including the Area sown more than once during the Agricultural year. The gross area sown or Gross cropped area during 2013-14 is 62.88 lakh hectares as against 56.90 lakh hectares in 2012-13, showing an increase of 10.51 percent, this increase was due to favorable seasonal conditions and availability of water in Irrigation sources in 2013-14.

3.5 Area Sown More Than Once

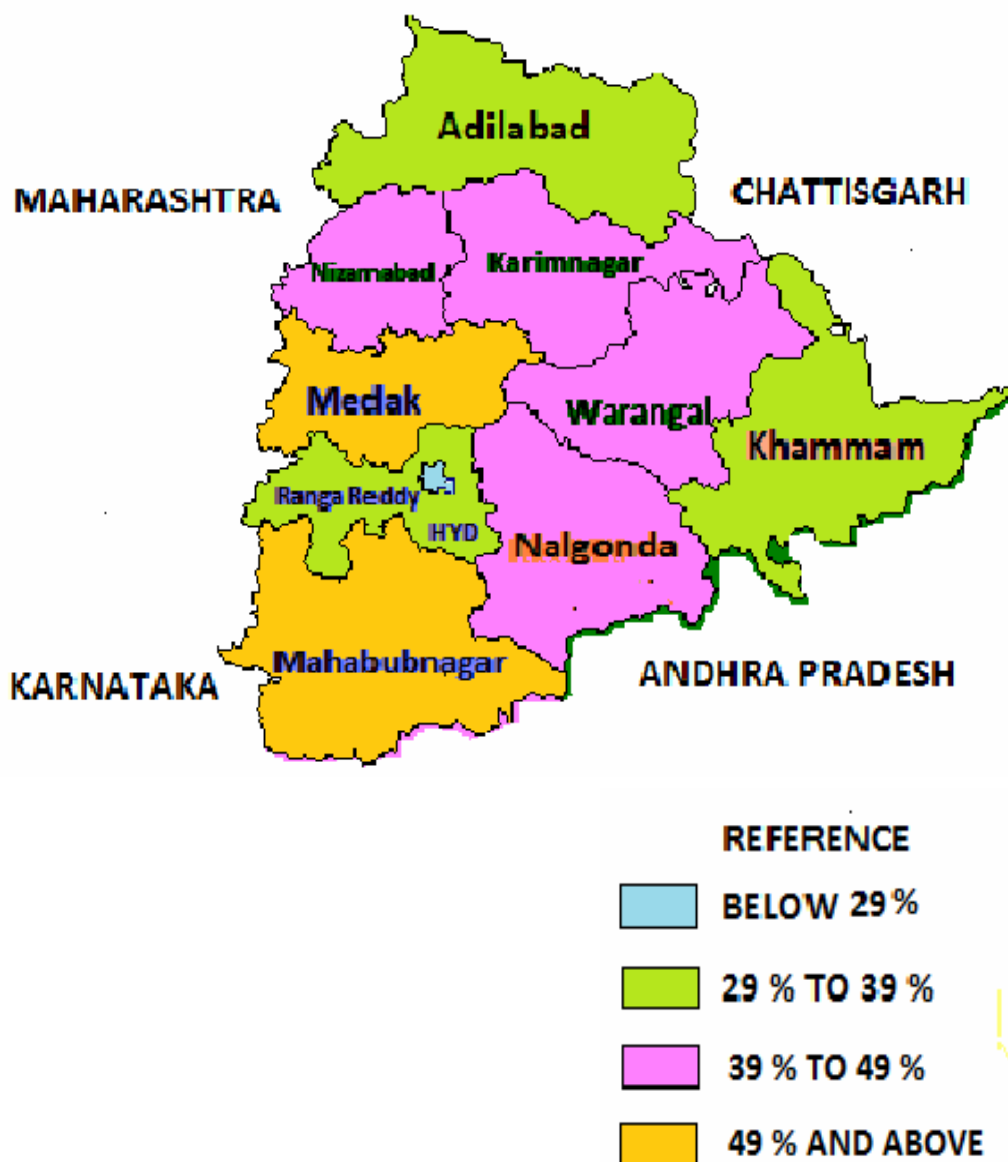

Area on which crops are cultivated more than once during the agricultural year. During the year 2013-14 it was 13.27 lakh hectares as against 10.36 lakh hectares in 2012-13 showing, an increase of 28.09 percent. The area sown more than once constituted 26.75 percent of net area sown in the State.

3.6 Cropping Intensity

Cropping intensity is one of the indices for assessing the efficiency of agriculture sectors. The cropping intensity is the ratio of gross area sown to Net area sown. It was 1.27 in 2013-14 where as it was 1.22 in 2012-13 showing an increase of 4.10 % over previous year. The cropping intensity is highest in Nizamabad district (1.67 %) followed by Karimnagar 1.53 and Warangal 1.36. The level of cropping intensity moves on accordance with the behaviour of the Monsoon and availability of water in Irrigation Sources.

4. SOURCES OF IRRIGATION

Any crop which is irrigated at least once before getting harvested is called as an irrigated crop . Basing on the clarification given in G.O.M.S No 265 of Rev Dept Dt 18.3.92 , the cropped areas are classified as irrigated and Unirrigated areas.

The gap between average yield and the yields of irrigated and un-irrigated tracts is so wide that for proper assessment of production potentialities, it is essential to have separate data for irrigated and un-irrigated areas, according to different sources of irrigation and different crops.

The main sources of irrigation in Telangana are Tube wells , Dugwells , canals and tanks.

- **District wise details of Number of Irrigation Sources are available in Detailed table III A1**
- **District wise details Names of Project Canals are available in Detailed table III A2**

Net area irrigated by all sources during 2013-14 was 17.74 lakh hectares as against 19.85 lakh hectares in 2012-13 showing decrease of 10.63 percent.

The net area irrigated during 2013-14 constituted 38.12 percent of net area sown in the State. The net area irrigated by wells constituted 83.77 percent of Total Area Irrigated under all sources.

Karimnagar and Warangal districts are top with 3.35 and 3.22 lakh hectares respectively of Total net area irrigated during 2013-14. The source-wise net area irrigated is given in Table-4.1

5.1 Cropping pattern means the proportionate area under different crops during an Agricultural year. Rice, Wheat, millets, Pulses, condiments & spices, Sugarcane, Vegetables and Fruits constitute food crops. Rice is the major staple crop in food crops. Non-food crops constitute fibres, Oilseeds, Pulp & Timber, Drugs and Narcotics including Tobacco, fodder crops, Green manure crops, Aromatic Plants, Flowers and Others. The gross cropped area under all crops increased to 62.88 lakh hectares during 2013-14 from 56.90 lakh hectares in 2012-13, showing an increase of 10.51 percent. The area under different crops and their percentage to total cropped area during 2013-14 and 2012-13 with the average of preceding 5 years is given in table 5.1.

5.2 Area Under Food Crops:

Besides food grain crops, Condiments and Spices Sugarcane, fruits and vegetables also constitute food crops. 6. AREA, PRODUCTIVITY AND PRODUCTION

6.1 Rice:

6.1.1 Rice is the principal crop extensively cultivated in all the districts of the State both in Kharif and Rabi seasons. Paddy Crop accounted for 31.95 percent of the total cropped area and 58.13 percent of the total area under Food-grain crops during 2013-14. The area under Rice during 2013-14 was 20.09 lakh hectares as against 14.18 lakh hectares in 2012-13, recording an increase of 41.68 percent. The area under Rice increased due to favorable seasonal conditions and adequate water in Irrigation Sources during the current year i.e., 2013-14. Karimnagar District is at the top with an area of 4.18 lakh hectares, followed by Nalgonda 3.94 lakh hectares, Nizamabad 2.61 lakh hectares and Warangal 2.55 lakh hectares.

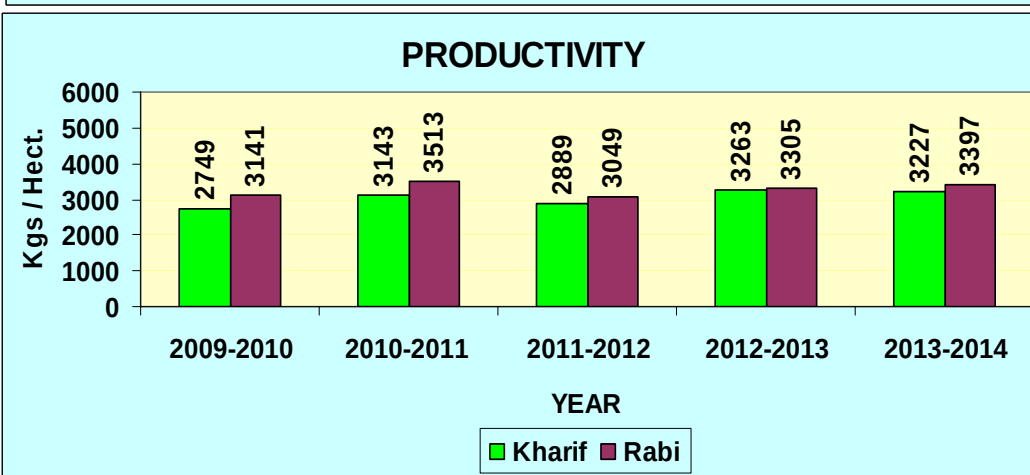

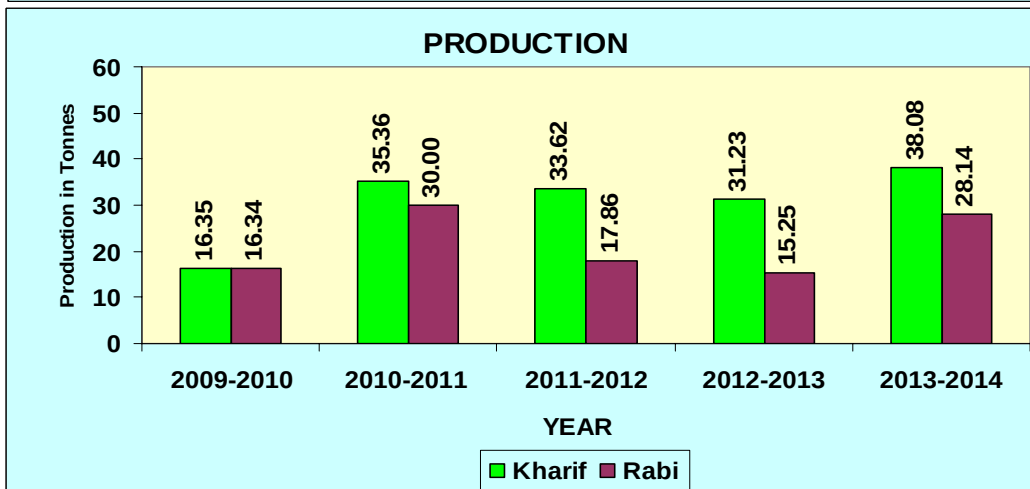

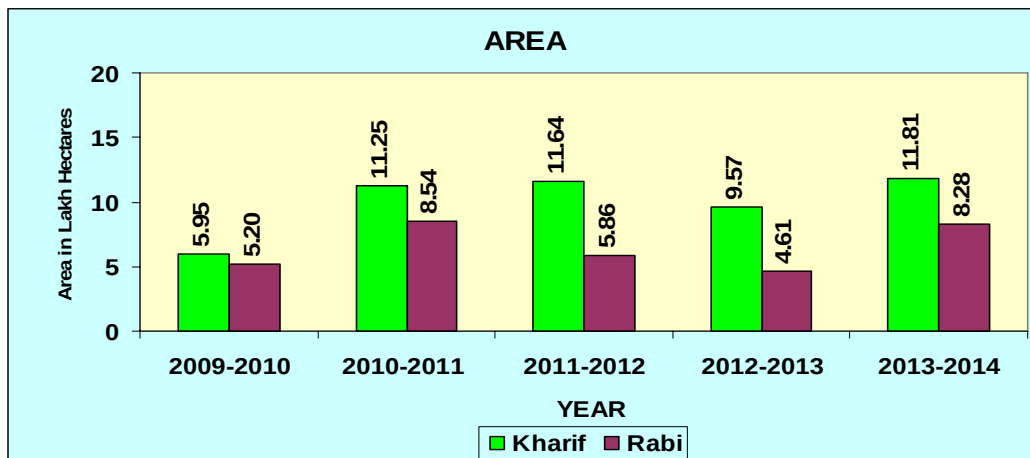

6.1.2 The production of Rice during 2013-14 was 66.22 lakh tonnes as against 46.48 lakh tonnes in 2012-13, recording an increase of 42.47 percent. The Production was increased due to increase in the area significantly and modest increase in Rabi productivity during the current year when compared to previous year.

6.1.3 The Productivity of Rice is 3297 Kgs/hect in 2013-14 as against 3277 Kgs/hect. in 2012-13 recording a slight increase of 0.61 percent over previous year. The area, productivity and production of Rice in the State for the last 5 years are presented in table 6.1.

Pulses

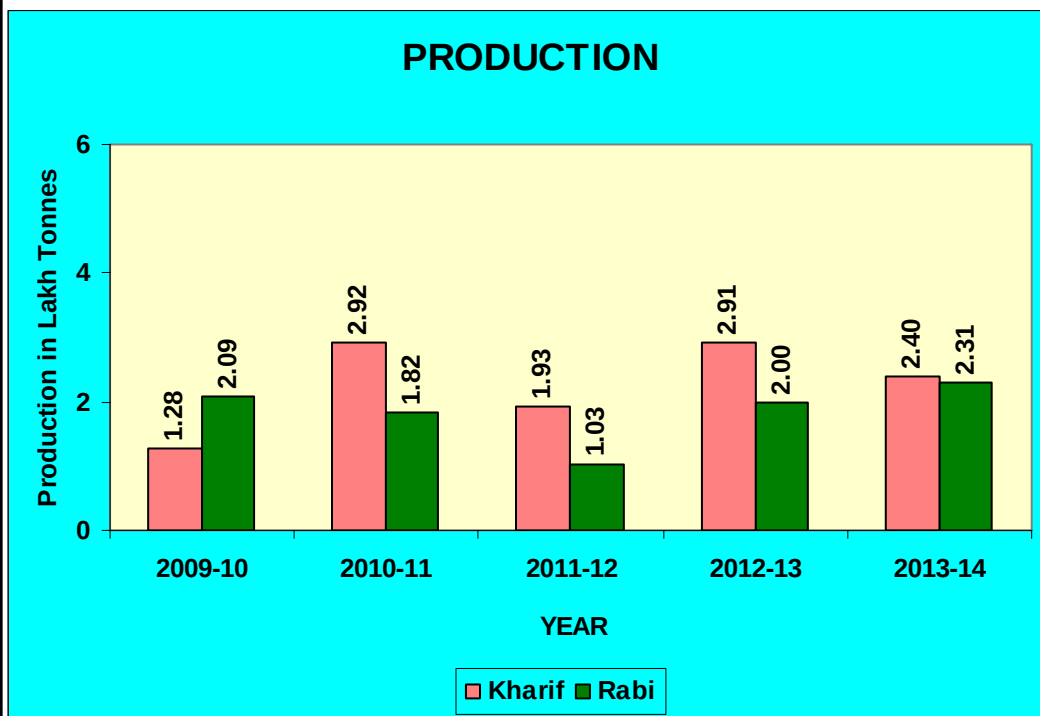

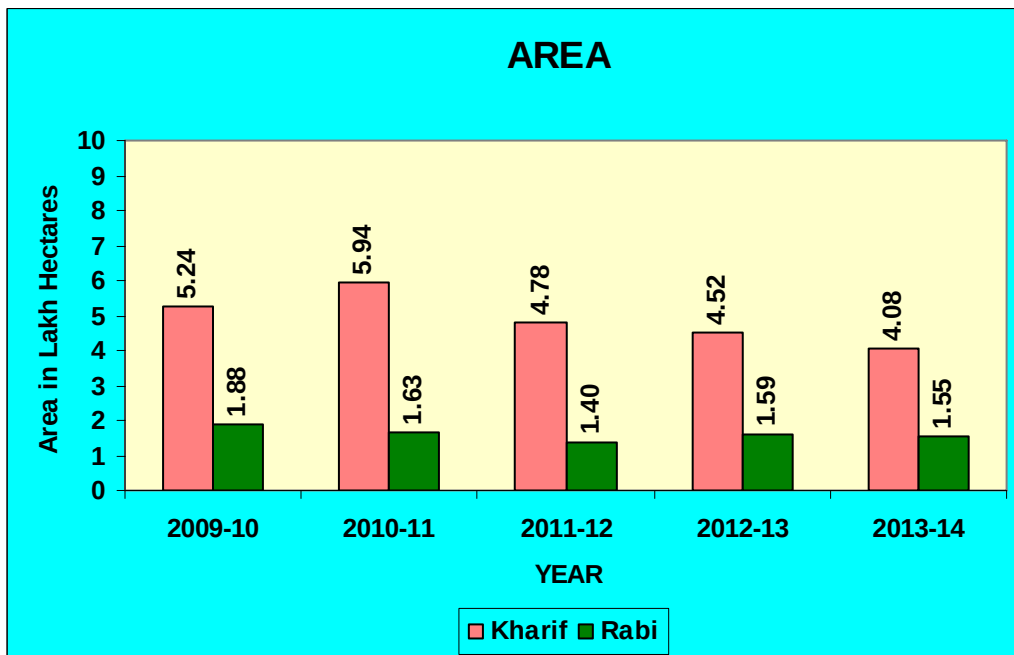

6.7.1 Pulses comprise Redgram, Bengalgram, Greengram, Blackgram, Horsegram Cowgram and other pulses. The area under these pulses accounted for about 8.95 percent of the total cropped area and 16.29 percent of the Total Foodgrains cropped Area in the State during 2013-14. The area under pulses was 5.63 lakh hectares during 2013-14 as against 6.11 lakh hect. in 2012-13, which shows a decrease of 7.86 % over previous year.

6.7.2 Out of 4.71 lakh tonnes of production of pulses in the State during 2013-14 Bengalgram, Redgram, Greengram and Blackgram Crops reported 1.95, 1.40, 0.87 and 0.39 lakh tonnes respectively and these crops production constitutes 97.88 per cent of the total pulses production. The production of pulses was 4.71 lakh tonnes during 2013-14 as against 4.91 lakh tonnes in 2012-13, showing a decrease of 4.07 percent. The decrease in production is due to decrease in the Area under pulses crops and also decrease in yields of majority pulses crops during 2013-14. The area and production of pulses from 2009-10 to 2013-14 are shown in the table 6.7.
